Call Center

Analysis Zone

Overview

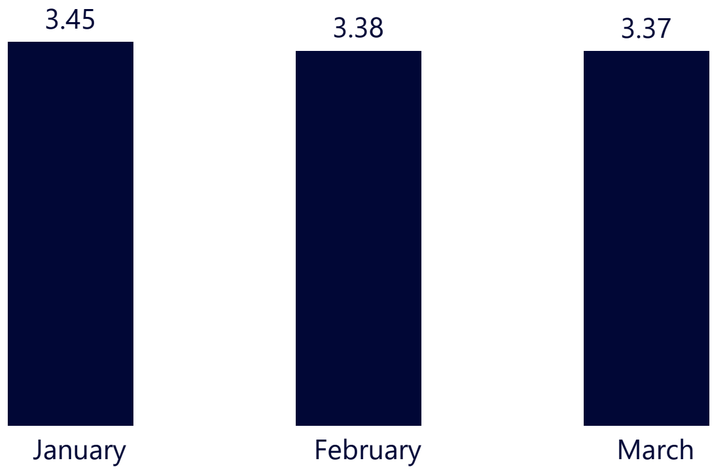

Why!

Call center performance

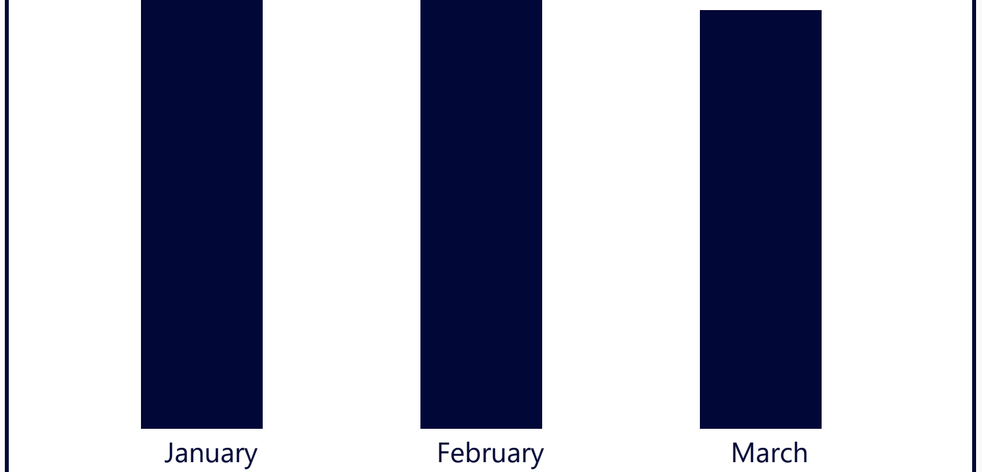

Total calls	Resolution Rate Resolved calls out of all calls	Average call duration Answered calls only, in seconds	Average speed of answers Answered calls only, in seconds
5,000	73%	225	67.5

Average satisfaction rate for answered calls by month

January has the highest average satisfaction (3.45), but the gap between the months is very small.

Average calls volume per day by month

Month

- [ ] Select all

The data covers January to March 2021.

Call Center Performance Analysis

Calls Volume for each agent

Answered Rate

Answered calls out of all calls

81%

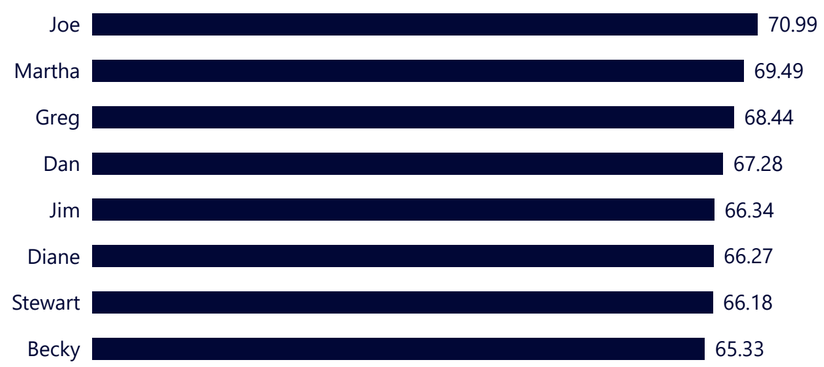

The statsfaction for each topic

Differences between topics are very small

Topic	AVG of Satisfaction Rate
Admin Support	3.43
Technical Support	3.41
Streaming	3.40
Payment related	3.40
Contract related	3.38
Total	**3.40**

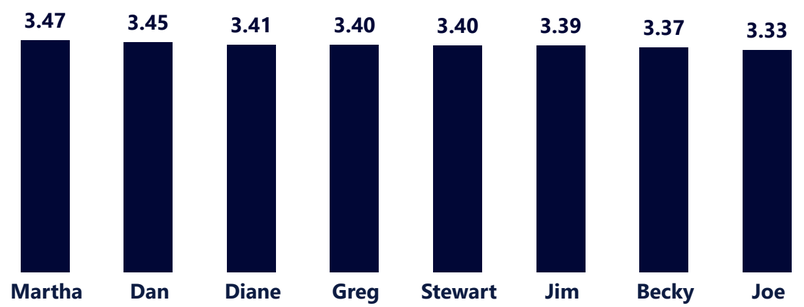

Average speed of answers for each agent

Answered calls only, in seconds

Avg of satisfaction rating by each agent for answered calls

The difference is too small to tell that one agent is better than the other one

Resolved calls out of answered calls

(Answered % (of all calls))

Agent	Resolved	Answered
Greg	90.64%	80%
Jim	90.49%	80%
Diane	90.22%	79%
Joe	90.08%	82%
Dan	90.06%	83%
Martha	89.69%	81%
Total	**89.94%**	**81%**

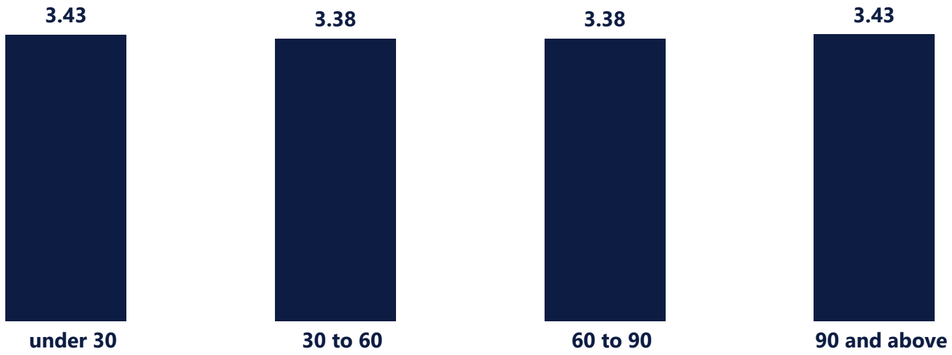

Agents are very close on resolution, answering, speed and satisfaction, so the data does not support ranking them.

Key Findings and Recommendations

Unanswered calls out of all calls	Answered but not resolved out of all calls	Resolution Rate out of all calls
19%	8%	73%

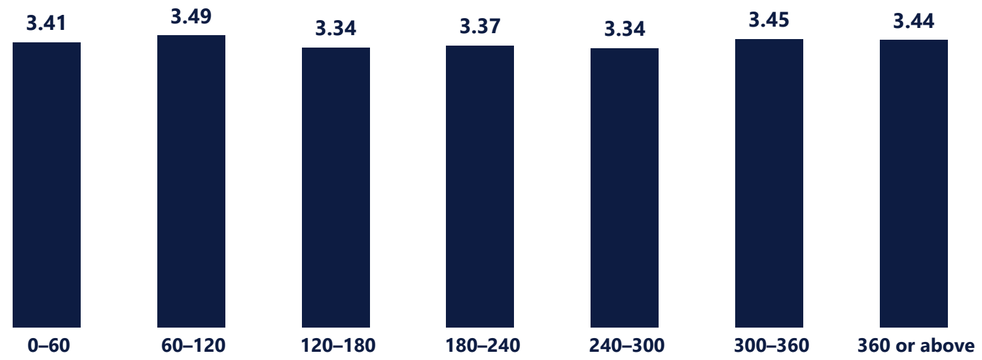

Avg Satisfaction rate by Answer speed in ranges (answered calls only)

Satisfaction is about the same whatever the answer speed, so waiting time is not associated with lower ratings.

Avg Satisfaction rate by Talk Duration in ranges (answered calls only)

Satisfaction is about the same whatever the Talk duration, so talking time is not associated with lower ratings.

19% of calls were never answered, more than double the 8% that were answered but not resolved. On this page, neither answer speed nor call duration is associated with satisfaction. Topic and agent comparisons are on the Analysis page, where the differences are also too small to rank. The data covers only three months and does not say why calls went unanswered (agent availability or customer hang-up), so these findings are limited.

Recommendation 1: record why calls go unanswered :
Because the data has no record of why calls went unanswered, the call center should record a reason for every unanswered call (for example, customer hung up while waiting, or no agent available). 19% of calls were never answered, more than double the 8% that were answered but not resolved, so this is the biggest loss.

Recommendation 2: judge agents only with more data
Because the agents are very close on resolution, answering, speed and satisfaction, the call center should not rank agents on three months of data. More months would show whether the small gaps are real or just noise.
